I tried to complete the online survey which clearly will not work on an ipad (which is not a fair process if you either take no notice of our comments as you ignored the last set of response from the Berkeley residence even though we had the highest number of responses)

I am not against more house in proportion to our village but this is far too large to meet the needs of local people and will not serve people with in the county as it will attract those from bristol looking for cheaper housing. Who will work and spend money in bristol. We support dispersal of the large number of houses through out the whole county not dumped on Sharpness as a cheap land option.

It will ruin our community and character of our lovely village of Sharpness which is not a run down dockland portrayed by the developers but a lovely countryside village surrounded by green fields and a stunning canal and thriving port. I understand this is referred to as coalescence.

The main problem also is there is only one main road to this area from the A38 and no plans to add more. There is also a lack of infrastructure since the council closed out local hospital, secondary school, library and the doctors is on the brink of shut down and the banks all closed. There will be no jobs here, they cannot even get businesses to take on the old power station units. Everyone will commute to bristol (at a terrible environmental impact).

The environmental impact on building on green field sites will be detrimental for nature and have a massive impact on wildlife. I read the study you have produced but it just kept saying more research needed to be done in the future.

I feel you are not listening to the people or councillors that live here which is an unfair process and this huge development is not needed here.
